

# Religious Devotion and Gender Equality: Parental Religiosity, Collective Conservatism, and Missing School-Girls in Turkey

**Melike Kökkızıl<sup>†</sup>**

<sup>†</sup>Free University of Bozen-Bolzano

# Global Gender Equality

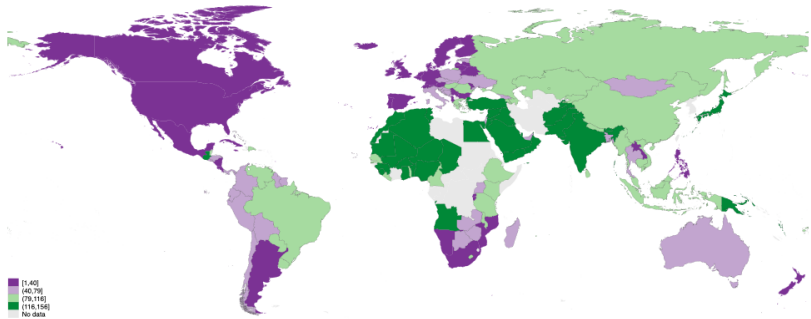

Figure: Global Gender Gap Rankings, 2020

# Research Question: Muslim Religiosity $\xrightarrow{??}$ Gender Equality

- **I focus on Turkey and the first years of Turkish Republic:**
  - **Laïcité & Largely homogeneous society** due to the historical events (e.g., Muslim-dominant, agricultural society with poor literacy rates)
  - **Compulsory schooling laws** were not compelling enough until 1961
  - **First generations:** 1923-1955 cohorts for which  $\nexists$  discontinuity in enrollment process
  - **Erdogan desires to make Islamic values dominant again**

# What I Do

- ① **Religiosity**  $\xrightarrow{?}$  **Gender disparity in primary (quasi-compulsory) school attendance**
- ◇ **Data:** Pooled dataset of Turkish Censuses in 1985, 1990, and 2000
    - ◇ Religious denom. or parental characteristics unknown at ind.level
    - ◇ But birth-place and birth-year according to census year, and the highest level of completed education of individuals
  - ◇ **Identification:** 2 variations using Ramadan as quasi-natural exper.
    - ① Distance of enrolment dates in primary school to Ramadan
    - ② Fasting duration at school registration year in primary school
- ② **What are the implications for gender equality in the long run?**

### Labor market outcomes

- Labor force participation
- Being an income-earner
- Having a professional jobs

### Demographic outcomes

- Marital status
- Number of children
- Housewife status

## Holy month of Islam: Ramadan

- Ramadan  $\Rightarrow \uparrow$  Religiosity among *adults*
- Ramadan fasting: a pillar of Islam ( $\approx 75\%$  of adults in TR fast)
- Per religious teachings: Compulsory religious practicing (e.g., fasting and wearing a headscarf) begins *after their puberty*
- Islamic calendar (hence Ramadan month) follow *lunar-phase cycle*
- Ramadan moves around ten days earlier every year whereas the schooling age and enrollment dates are presumably fixed over time
- Fasting Duration $_{p,t} = f(\text{Coordinates}_{p,t} ; \text{Ramadan dates}_t)$ .

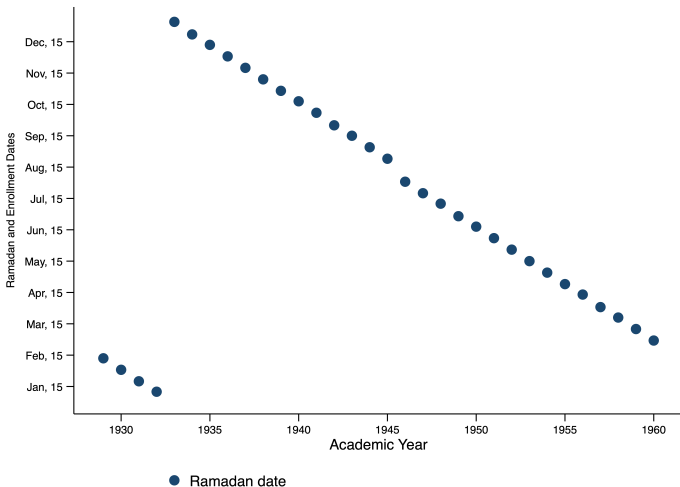

# Holy month of Islam: Ramadan

# Mechanism

- ① The effects may be partially due to
  - the prevalent division of labor at home
  - income and other constraints due to fasting

Yet, these are merely explaining fasting duration results [▶ Table](#)

- ② Public servants' preferences or dress codes are not main drivers as the effect is the largest at the highest grade [▶ Figure](#)
- ③ Rather, it is likely that parents signal their religiosity through girls' education...
- ④ From contemporary survey data: Ramadan (religiosity and collective conservatism) causes females to report more traditional attitudes towards gender roles [▶ Balance](#) [▶ Religiosity](#) [▶ Gender Norms](#)
