Introduction •000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 000000
Example					

- Two public transport companies are considering opening a line between two cities
- They choose one of two possibilities
 - Express direct between central stations
 - Local-town travels through small towns along the way
- Payoffs

	Local — town	Express
Local — town	40, 40	60,80
Express	80,60	50, 50

▲ロ ▶ ▲周 ▶ ▲ 国 ▶ ▲ 国 ▶ ● の Q @

Introduction 0000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 000000
Example	e - Continue	ed			

- Suppose one company is considering another local line: Local-village
- Payoffs are identical to Local-town

	Local — town	Express
Local — town	40, 40	60,80
Local – village	40, 40	60,80
Express	80,60	50, 50

• Extensively studied in individual choice problems

Introduction 0000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 000000
Motivati	on				

- In individual choice irrelevant alternatives may indirectly impact agents' choices
- Extensively studied in individual choice problems
- Our goal explore whether irrelevant strategies impact behavior in strategic environments, i.e., games

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

Introduction 000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 000000
Goal Bre	eakdown				

- Direct effect: how do the players who are introduced with an "irrelevant" strategy react?
- Indirect effect: do the other players respond?
- Outcome: in coordination games, is equilibrium reached more often in the presence of the irrelevant strategy?

Main Fi	ndings				

• Dominance and duplicates effects in coordination games

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

- Lead to higher coordination rates
- No effects in single equilibrium games

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三三 - のへぐ

Psychological Mechanism

- Irrelevant strategies affect players
- But the effect is not always there

Psychological Mechanism

- Irrelevant strategies affect players
- But the effect is not always there
- Not an individual, strategy-free response. Rather,

▲□▶ ▲□▶ ▲ 三▶ ▲ 三▶ 三 のへぐ

• Standard solution concepts regard the added strategies as irrelevant

▲□▶ ▲□▶ ▲□▶ ▲□▶ ■ ●の00

• Equilibrium refinements (perfect equilibrium, proper equilibrium) are unable to explain the findings

Introduction	Individual Choice	Strategic Environments	Design	Results	Discussion
0000		00000	0000	000000000000	000000
Existing Modelling Approaches					

- Standard solution concepts regard the added strategies as irrelevant
- Equilibrium refinements (perfect equilibrium, proper equilibrium) are unable to explain the findings
- Alternative approaches
 - Quantal Response Equilibrium (McKelvey and Palfrey, 1995)

- ロ ト - 4 回 ト - 4 □ - 4

- Sampling Equilibrium (Osborne and Rubinstein, 1998)
- Level-k
- Cognitive Hierarchy (Camerer et al., 2004)
- Generalized Cognitive Hierarchy (Chong et al., 2016)

Introduction 0000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 0000●0
Adapted	l Level- <i>k</i>				

- General idea: level k best responds to level k-1
- Normally: level-0 plays uniformly
- Adaptation: "context-effected level-0" who is attracted to dominant/duplicated strategies
- Allow for heterogeneous risk attitudes (at least some are moderately risk averse)
- With these adjustment, our findings may be explained
 - No behavioral level-0 types
 - Level-1 and level-2 who anchor beliefs on such a type

Introduction 0000	Individual Choice	Strategic Environments	Design 0000	Results 000000000000	Discussion 0000●0
Adapted	Level- <i>k</i>				

- General idea: level k best responds to level k-1
- Normally: level-0 plays uniformly
- Adaptation: "context-effected level-0" who is attracted to dominant/duplicated strategies
- Allow for heterogeneous risk attitudes (at least some are moderately risk averse)
- With these adjustment, our findings may be explained
 - No behavioral level-0 types
 - Level-1 and level-2 who anchor beliefs on such a type
 - Sometimes level-0 is only in the minds of higher types (Crawford and Iriberri, 2007)
