Introduction

Neha Gupta, PhD

 Image: boot of the state of the s

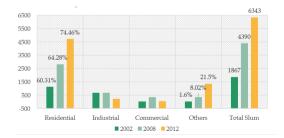

・ロト ・四ト ・ヨト ・ヨト

- 35% (Approx.) of India is urbanized (World Bank, 2021)
- 21.9% of Indian population lives under the poverty line (Planning Commission, 2013) or (17.9%, PLFS 2020-21?).
- Urbanisation provides economic opportunities.
- BUT often urban migration creates slums (Kling et. al., 2001 and Barnhardt et. al., (2015))

(a) < (a) < (b) < (b)

Motivation: Locational Choices of slums

イロト 不得 トイヨト イヨト

Neha Gupta, PhD

August 22-26, 2022 4 / 40

ъ

Motivation: Economic opportunity or adversity?

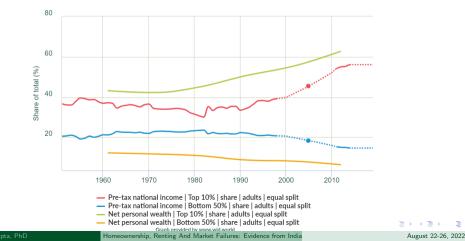

Dilapidated housing, lack of effective service provisioning, lack of tenure, market failures and coordination and governance gap

Motivation: The Socio-Economic-Human Development Puzzle

Gini Index (2018): Income Inequality - 0.63, Wealth Inequality - 0.75

Income and wealth inequality, India, 1951-2019

2-26, 2022 6 / 40

Research Question

• Does a strong urban governance reform at all administrative and political tiers have multi-dimensional welfare effect for slum dwellers?

- I exploit a national slum housing policy intervention JNNURM-IHSDP (2005-2012), to empirically estimate the effect on
 - housing rental expenditure
 - homeownership
 - women empowerment
 - quality of housing

< ロ > < 同 > < 回 > < 回 >

Literature

Poverty trap and investment inertia:

- Azariadis and Drazen (1990), Murphy et. al., (1989)
- Banejee et. al.,(2002), Durrand-Lasserve et. al.,(2007)

Market failure and governance gap:

• Davis (2006), Barnhardt et al., (2015), Nolan et. al., (2018)

Socio-economic inequality:

• Durlauf (2003), Oreopoulos (2003), Feng et. al., (2015)

Contribution to Literature

- First paper to empirically investigate this policy.
- Unique dataset combining multiple datasets at district level.
 - Multiple years survey data for 18,646 slum households.
 - Digitized detailed report of town level housing projects.
- Address multiple gaps in the literature related to governance gap, political and administrative conflict, public-private partnership.

Preview of Main Results

The nation wide urban slum housing policy:

- Increases real rents significantly.
- Females more likely to be the household head.
- Slum households are more probable to be homeowners.
- Partial improvement in quality of dwelling.
- Legal slums are more likely to benefit from the policy.

イロト イロト イヨト イヨト 三日

JNNURM-IHSDP Policy

- Single largest 'governance reform-driven initiative' from 2005-2012.
- Efficient, equitable and responsive cities.
- Mandatory coordination by central and state governments, urban local bodies.
- Integrated slum development in 887 'less developed urban area'.
- Mandatory and optional reforms to access funds (80:20).

< □ > < □ > < □ > < □ > < □ > < □ </p>

Polic

JNNURM-IHSDP: Reforms

- Subsidized affordable housing.
 - Land entitlement to females.
 - Beneficiary contribution 12%.
 - Maximum cost of dwelling 80,000 INR (USD 1050).
 - Two room accomodation with kitchen and toilet.
 - Maximum dwelling area 25 sqm.
- Stricter rent control laws.

Data

◆□▶ ◆□▶ ◆臣▶ ◆臣▶ ─臣 ─の�?

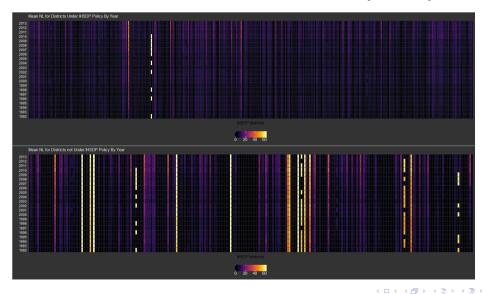

• Pooled cross-sectional household survey for year 2002, 2008, 2012 (NSSO India)

- Urban households located in slum areas at district level.
- 5818 hhds (2002), 7510 hhds (2008), 5318 hhds (2012)
- characteristics: social, household, demographic, living facilities.
- rents, gender of hhd head, homeownership, dwelling characteristics, slum type.
- JNNURM-IHSDP policy areas detailed monitoring report of housing projects at town level (Indian Ministry of Housing and Urban Affairs, 2019)
- **District economic activity**: mean nighttime light intensity from 1992-2013 for 631 districts (DMSP-OLS)
- Inflation rate: consumer price index 2002, 2008, 2012.

人口》 人間》 人口》 人口》

Methodology

Quality of Dwelling Deprivation Score (QODDS)

- 15 dwelling characteristics, for e.g., drinking water, bathroom, electricity, drainage, kitchen, roof, etc.
- Assignment of weights from (0-2) in decreasing order of quality (Nolan et. al., 2018).
- Aggregate QODDS score ranges from [0-24.5]

A D > A B > A B > A B >

Methodology: Assignment to Treatment

- A town/urban area with at least 50% take up rate of completed dwelling.
- Match the town with the district.
- Unit of treatment D_{ij} : slum household *i* in district *j*.

$$m{\mathcal{D}_{ijk}} = egin{cases} 1 & ext{if } d_{ijk} = ext{IHSDP district} \ 0 & ext{if } d_{ijk} = ext{No IHSDP district} \end{cases}$$

• $Pre/post policy period T_i$:

$$\mathbf{T}_{i} = \begin{cases} 1 & \text{if } t_{i} = 2008, 2012 \\ 0 & \text{if } t_{i} = 2002 \end{cases}$$
