

# Children and Relationship Quality

Belén Rodríguez Moro<sup>1</sup>      Olatz Román Blanco<sup>1</sup>  
[Belen.Rodriguez@eui.eu]      [Olatz.Roman@eui.eu]

<sup>1</sup>European University Institute

August 2023, EEA

*My husband is asking why don't we have another child. But what does he mean by "we"? He barely takes care of the one "we" already have*

*"I do everything myself...When he comes from work, he says he's too tired to help me out"*

## 1. Motivation

- ▷ *Having children changes **women's** lives*: career decisions, home production...  
[Kleven et al. (2019); Goldin (2021)]
- ▷ *Relationship Quality*: non-pecuniary gains from being in a couple
  - Influence marital decisions, parental investments in child education...
- ▷ Explain unexpected consequences of some pro-fertility policies  
[Farré and González (2019); Avdic and Karimi (2018)]

## 2. This paper

### Research question

*Study the impact of first child birth on couple's relationship quality*

- Novel measure of Relationship Quality (RQ)
- Dynamic DiD around first child birth

*First child birth significantly and persistently reduces RQ*

### Mechanism

Children as a **shock** to **home production** → time rearrangements

*Increase in housework, internalized by women, and specialization for all couples*

*Larger changes in time arrangement = Larger impact on RQ*

Use expansion of state-funded childcare to establish a causal link *Preliminary!*

### 3. Data and measure

*Target population:* individuals in cohabiting relationships that **become parents**

*Data source:* household panel data from Understanding Society (UKHLS) spanning periods 2009-2022

Partner Questionnaire to **both cohabiting partners individually:**

(a) Subjective assessment	(b) Couple time use
<i>How often do you... ?</i> consider splitting regret getting married quarrel get on each others nerves	<i>How often do you... ?</i> work together on a project stimulating exchange of ideas calmly discuss something kiss partner
<i>What is the... ?</i> degree of happiness w/ couple	<i>Do you and your partner... ?</i> engage in outside interests

*Measure:* **factor analysis to construct RQ**

- Standardized and increasing

Distribution

Determinants

---

Validity exercises:

Infomativity

Interpersonal Comparability

## 5. Methodology

### I. Impact of first child birth on RQ

- ▷ Dynamic DiD: **Two-Way Fixed Effects** specification:

$$y_{i,t} = \alpha_i + \mu_t + \sum_j \{j = t - G_j\} \delta_j + u_{i,t}$$

- $\delta_j$ : ATT's parameters
- Use estimator proposed by Callaway and Sant'Anna (2021)
  
- ▷ Assumptions for causality:
  - **No anticipation effects**  
*No abrupt changes in RQ preceding first child birth*
    - ◀ RQ moments
    - ◀ RQ mean: by age
  
  - **Conditional parallel trends**  
*RQ of parents would have evolved the same in the absence of treatment*
    - ◀ Age and tenure profiles
    - ◀ Fertility treatment
    - ◀ Treatment cohort

## 6. Main result

*A top 10% couple in the RQ ranking becomes a median couple after child birth*

*Related results:*

Gender differences

◀ General well-being

Happiness with relationship

## 6. Main result: robustness checks

### ▷ Main specification

- OLS estimator
- Age and Relationship tenure as time FEs
- Child penalty specification [Kleven et al. (2019)]

◀ TWFE age

◀ TWFE tenure

No Controls

### ▷ Measure of RQ

- Removing Couple time use items
- Building RQ with parent scores
- Item by item
- Measures from psychology

◀ Subjective RQ

Parent RQ

Each item

RDAS

### ▷ Sample selection

- For first born boys and girls
- Only couples that do not split
- Total amount of kids in fertility cycle

Boy # Girl

No splitting

Total fertility

## 7. Mechanism: children as time shock

### Related results

- *Women specialize in housework production, regardless of pre-birth arrangements*
- *Couples experiencing largest time changes suffer the most*

(a) Paid work hours

(b) Unpaid housework hours

## 8. A childcare expansion: shock to parental time use

*Institutional context: state-funded childcare in England*

- ▷ English local authorities (LAs) provide **free childcare** to 3 (since 2004) and 4 (since 2001) year olds
  - **Universal, 15 hours a week** for 38 weeks a year
- ▷ **September 2017:** expansion to **30 hours a week**, for parents of **3- and 4-years olds:**
  - Both work at least 16 hours weekly at minimum wage
  - Earn less than £100,000 yearly

*Exploit spatial variation in policy roll-out:*

[Blanden et al. (2014); Brewer et al. (2014)]

- ▷ LAs differ in capacity to meet new childcare demand
  - #3-and 4-years olds per childcare center in 2017
    - >35 children: low capacity
    - 25-35 children: medium capacity
    - <25: high capacity

◀ Regional variation

## 8. A childcare expansion: shock to parental time use

$$y_{ilt} = \beta_0 + \beta_1 1\{Elig\} + \beta_2 1\{Sept2017\} + \gamma_j D_{ilt} +$$

$$+ \underbrace{\delta_1 1\{Elig\} \times 1\{Sept2017\}}_{IIT} + \underbrace{\delta_j 1\{Elig\} \times 1\{Sept2017\} \times D_{ilt}^j}_{\text{Treatment intensity}} + \Gamma X_{it} + \alpha_t + u_{it}$$

$1\{Elig\}$ : child aged 3-4 years old

$D_{ilt}^j$ : type of LAs by adoption capacity

	(1)	(2)	(3)	(4)
	Childcare use	Paid hours	Housework hours	RQ
Elig. $\times$ Sept 2017	-0.153* (0.090)	-4.126 (2.877)	0.788 (2.498)	0.133 (0.336)
Elig $\times$ Sept 2017 $\times$ Large capty.	0.279* (0.149)	5.718 (4.698)	-3.657 (3.771)	-0.741 (0.670)
Elig $\times$ Sept 2017 $\times$ Med. capty.	0.187 (0.138)	-1.116 (5.496)	-1.065 (3.738)	-0.454 (0.567)
Controls	Yes	Yes	Yes	Yes
Observations	1,194	1,146	673	781

Standard errors in parentheses

\*  $p < 0.1$ , \*\*  $p < 0.05$ , \*\*\*  $p < 0.01$

## Conclusions

- (1) Having a child reduces RQ significant and persistently
- (2) Parents change the way in which they use their time
  - Increase in housework
  - Reallocation of paid and unpaid work → Suffer more for larger changes

*Next steps:* leverage quasi-random variation in parental time use using childcare expansion

## "Non-resting mums", by Moderna de Pueblo

◀ Back to motivation

*My husband says we should have another kid. But, we? He barely takes care of the one we have*  
*My husband was like that before, but he's changed a lot in the last months...*

# "Non-resting mums", by Moderna de Pueblo

*Now, some days a week, he plays with the child, puts him into bed, brings him to school, and even prepares the baby's meals...*

*Really? How did you do it?*

# "Non-resting mums", by Moderna de Pueblo

*I got divorced! Now he cannot avoid childcare and housework at least some days a week... Finally, I can take some rest!*

## Marginal effects by gender

Back

(a) Baseline specification

(b) Gender differences

## Impact on general happiness

[← Back](#)

“Have you recently been feeling reasonably happy, all things considered?”

### Pooled sample

### Marginal effects by gender

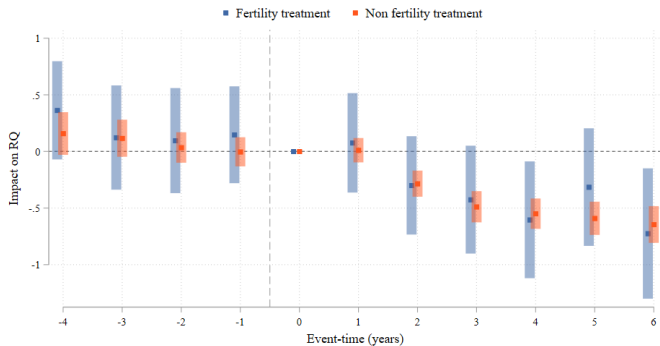

## RQ mean by event time: *early vs late-treated*

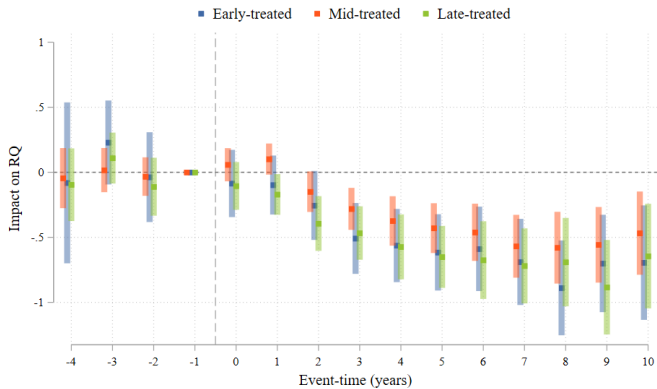

◀ Back

## Used fertility treatment vs no

◀ Back

$$y_{i,t} = \sum_{j \neq -1} \{j = t - G_i\} \delta_j + \sum_a \{a = \text{age}_{i,t}\} \alpha_a + \sum_d \{d = \text{tenure}_{i,t}\} \gamma_d + \sum_w \{w = \text{period}_t\} \psi_w + v_{i,t}$$

## Robustness: Construct RQ using parent scores

[← Back to results](#)

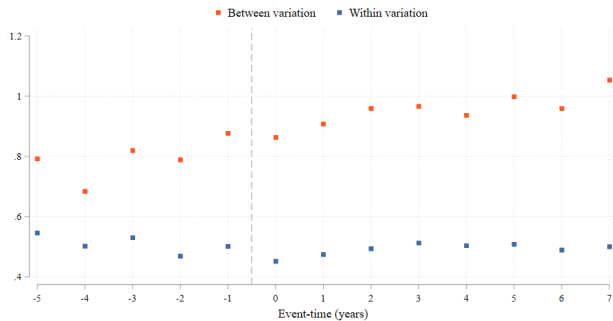

## Between vs within individual variation

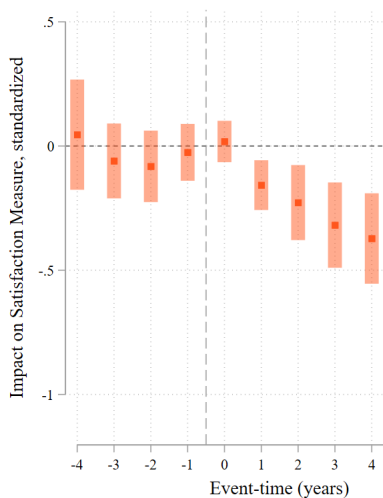

◀ Back

(a) Satisfaction RDAS

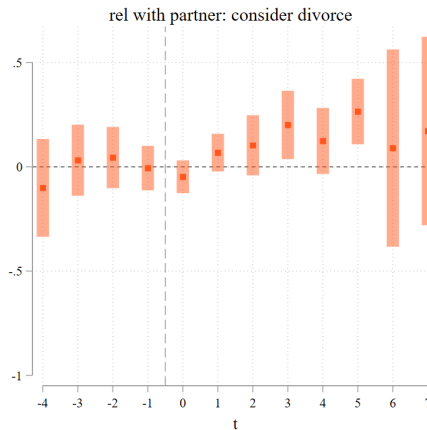

(b) Cohesion RDAS

(a) consider splitting

(b) regret getting married

(a) get on each other's nerves

(b) quarrel

## Robustness: Couples that don't split

◀ Back

(a) one child

(b) two children

(a) going outside together

(b) kissing

(a) exchange of ideas

(b) calmly discuss something

## Household classification

Compute gender splits for each type of work:

$$\text{woman's share} = \frac{\text{woman's hours}}{\text{man's hours} + \text{woman's hours}}$$

Classify couples by split **before** first child birth:

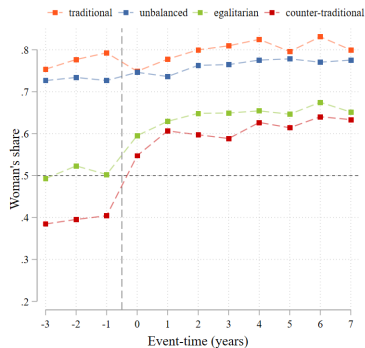

Summary before

- **Traditional:** women specialize in housework and men in paid work
- **Unbalanced:** women take a larger share of both
- **Egalitarian:** there is a 50-50 split of both among couple members
- **Counter-traditional:** men take a larger share of housework or of both types

(a) Paid work hours

(b) Unpaid housework hours

## Summary statistics by couple type, before birth
